

Listing of Claims:

1. (currently amended) A hand-held power tool, in particular a sander, comprising having a housing (10) and a motor (12), which is located in the housing (10) and [[. ]] ~~by way of which meter a~~ driven shaft (16), extending from a face end (14) of the housing (10), is drivable, and further comprising having a suction conduit (18), extending at least partway through the housing (10), wherein characterized in that the suction conduit (18) operates as an intake discharges at a the-face end (14) of the housing.

2. (currently amended) The hand-held power tool as recited in claim 1, wherein characterized in that the suction conduit (18) extends, in at least one region, by at least 180° around the driven shaft (16).

3. (currently amended) The hand-held power tool as recited in claim 2, wherein characterized in that the suction conduit (18) extends, in at least one region, by at least 360° around the driven shaft (16).

4. (currently amended) The hand-held power tool as recited in claim 1, wherein characterized in that the suction conduit (18) has an inner radial limitation, in at least one region, which comprises ~~has a~~ spacing of less than 1 cm from the driven shaft (16).

5. (currently amended) The hand-held power tool as recited in claim 4, wherein characterized in that the suction conduit (18), in at least one region, directly adjoins the driven shaft (16).

6. (cancelled)

7. (cancelled)

8. (cancelled)

9. (currently amended) A system comprising having a hand-held power tool, in particular a sander, comprising a housing (10) and a motor (12), which is located in the housing (10) and by which a driven shaft (16), extending from a face end (14) of the housing (10), is drivable, and further comprising a suction conduit (18), extending at least partway through the housing (10) as generically defined by claim 1, the system further comprising and having a tool receptacle with a suction conduit (20), wherein the suction conduit (18) in the housing (10) of the hand-held power tool and the suction conduit (20) in the tool receptacle are intended for direct coupling such that in an installed state of the tool receptacle are coupled via a region (26) that is open in a radial direction towards the outside of the hand-held power tool and the tool receptacle.

10. (cancelled)

11. (new) The hand-held power tool as recited in claim 1, wherein the suction conduit (18) comprises a chamber portion extending from the face end (14) of the housing (10) in an axial direction of the driven shaft (16), the chamber portion surrounding the driven shaft (16).

12. (new) The hand-held power tool as recited in claim 11, wherein after the chamber portion surrounding the driven shaft (16), the suction conduit (18) extends as a cavity along an underside of the motor (12) for the entire length of the motor (12).

13. (new) The hand-held power tool as recited in claim 1, wherein the suction conduit (18) is integrated at an underside with the housing (10).

14. (new) The hand-held power tool as recited in claim 1, wherein the suction conduit (18) extends in a longitudinal direction of the housing (10) from a housing end opposite the face end (14) that is proximate the driven shaft (16).

15. (new) The hand-held power tool as recited in claim 1, wherein the suction conduit (18) extends from the face end (14) of the housing (10) to an exhaust end of the housing (10) comprising an outlet stub (28).

16. (new) The hand-held power tool as recited in claim 1, wherein the suction conduit (18) comprises, in a front, angled region of the housing (10) extending in a radial direction about the driven shaft (16) for a length that is greater than a length of a region of the suction conduit (18) that surrounds the motor (12), and extends in a radial direction thereto.

17. (new) The hand-held power tool as recited in claim 1, wherein the suction conduit (18) is an annular conduit.

18. (new) The hand-held power tool as recited in claim 1, wherein the suction conduit (18) extends past a bearing flange (32) of the driven shaft (16) to outside of the housing (10).

19. (new) The hand-held power tool as recited in claim 1, wherein the suction conduit (18) comprises an annular gap.

20. (new) The hand-held power tool as recited in claim 9, wherein the open region (26) comprises an annular gap.

21. (new) The hand-held power tool as recited in claim 9, wherein the open region (26) extends between the face end (14) of the housing (10) and a top side (52) of the tool receptacle.

22. (new) The hand-held power tool as recited in claim 9, wherein a spacing extending in an axial direction between the face end (14) of the housing (10) and top side (52) of the tool receptacle is 1 mm.
